A UNIFIED METHOD AND SYSTEM FOR MULTI-DIMENSIONAL MAPPING OF SPATIAL-ENERGY RELATIONSHIPS AMONG MICRO- AND MACRO-EVENTS IN THE UNIVERSE

Abstract: A unified method and system that utilizes non-geodesic Platen (26) geometry of integrated Small Circles (52) and Small Polygons (54) to generate maps of spatial-energy relationships among micro-Events and macro-Events in the Universe. This method and system assumes universal continuous integrated relationships among all Events (22) with Spatial structures. This iterative method and system of map-making can be directional (30) and/or omni-directional (62) in its pattern of development. Maps generated with this method and system can show hierarchical levels of existence and multi-dimensional relationships among Events in the Universe. The mapping method and system shows energetic components inherent in the structural fabric of Space (66) and demonstrates the explanation for the expansion of the Universe.
